BERNAL AVENUE RESURFACING TO BEGIN

Anticipated Start Date on July 11, 2016

PLEASANTON, *Calif.* — The City of Pleasanton, in partnership with Ghilotti Construction Company, Inc., will begin resurfacing Bernal Avenue between Foothill Road and Valley Avenue and the roadwork is anticipated to begin on July 11, 2016.

The City Council approved the project at its June 7 meeting and awarded the contract in the amount of just over \$856,000 for the resurfacing project as part of its overall Capital Improvement Program. The Bernal Avenue Improvements, near the I-680 interchange have been divided into three phases, and this part of the project is the third and final phase.

Phase I consisted of the Bernal Avenue Interchange traffic signal installation, located at the I-680 southbound ramp. Stage II consisted of the installation of the landscape and gateway feature elements, which are currently under construction and anticipated to be completed shortly.

This final phase, Phase III, includes the resurfacing of Bernal Avenue between Foothill Road and Valley Avenue to keep the street in a serviceable, safe and smooth riding condition for both vehicular and bicycle traffic.

The project will resurface approximately 255,000 square feet of existing roadway with a new layer of asphalt concrete and will take roughly 40 working days (8 weeks) to complete.
