Tri-Valley Water Partners Launch New Website and Outreach Program

Delivering water for our community now and into the future

Tri-Valley, CA. – The Tri-Valley Water Partners have launched www.trivalleywater.org, a new website focused on the region's water supply reliability. The partners are a collaborative effort between the Tri-Valley's water wholesaler, Zone 7 Water Agency (Zone 7), and local water retailers California Water Service (Cal Water), the City of Livermore, the City of Pleasanton, and Dublin San Ramon Services District.

In 2019, Zone 7 completed the Water Supply Evaluation Update, which reaffirmed and clarified the need to pursue new water supply options for long-term water reliability in the Tri-Valley. Potential future water supply, conveyance, and storage options identified in the study included the Sites Reservoir, Los Vaqueros Reservoir Expansion, Delta Conveyance, potable reuse, and regional desalination. As none of these projects singlehandedly meet the water reliability needs identified in the study, they are all currently under evaluation and a combination of projects will eventually be selected for investment and implementation.

Under the guidance of the [Tri-Valley Water Liaison Committee](#) comprised of elected officials from the Tri-Valley Water Partners, it was agreed the water supply reliability options identified in the study needed continued evaluation, and a community outreach program to educate Tri-Valley residents and businesses about the region's water supply challenges and potential solutions needed to be developed. This new website and an accompanying "Water's Journey" [video](#) explaining the region's water supply support the launch of this new outreach program.

"Before beginning work on this program, we looked at past studies which demonstrated there is considerable confusion about where our water comes from and the system that provides it. Our goal with this education program is to give constituents a solid understanding of their water supply, so they can be more informed about the potential solutions to our water challenges," said Valerie Pryor, Zone 7 General Manager. "Equipped with this information, we feel residents and businesses will be in a better position to participate in the process of informing us which of the potential solutions we are currently exploring will best meet the needs and values of the community."

When visiting www.trivalleywater.org, users will learn about their water's journey to homes and businesses. The site also covers water supply challenges, and potential solutions including Sites

Reservoir and Delta Conveyance, as well as more local solutions like Los Vaqueros Reservoir Expansion, potable reuse, and regional desalination.

About Tri-Valley’s Water Partners

Zone 7 Water Agency treats and manages water supplies for eastern Alameda County, including the city limits of Livermore, Pleasanton, and Dublin and the Dougherty Valley area of San Ramon. Drinking water service is provided to these regions by the Tri-Valley’s water retailers – Cal Water, the Cities of Livermore and Pleasanton, and DSRSD.
